

Valve Function Test

1. Install the valve.
2. Cover the motion sensor (i.e. painter's tape, use a dark color).
3. Wait 7 minutes (allow the valve to close)
4. Flush the toilet (tank should not refill due to the valve being closed).
5. Remove tape from motion sensor.
6. Indicator light should blink blue, the valve should open, and allow water to flow to the tank.
7. If the valve does not allow water to flow through, please contact (239) 398-7736.
