

# THE TOILET SCROOGE™

PROTECTING YOU FROM LEAKS

## FEATURES

- **Hydro-generator**
- **Latching Solenoid Valve**
- **3/8" Connectors**
- **Motion Sensor**

The single biggest consumer of fresh water at 33.1 gallons per household per day (gphd) is the toilet; leaks consume 17 gphd. It is estimated that 20% of all toilets in the United States leak up to 200 gphd.

According to Parks Associates, in 2019 there are 121.09 million households in the United States with a compound average growth rate of 0.8%. In addition, 87 million of these households are single family dwellings that, according to the National Association of Home Builders, have 2.46 toilets per household; that's more than 214 million toilets of which 43 million are leaking some amount of water.

Furthermore, the insurance industry cites that water damage caused by leaking household plumbing is the second largest processed claim, affecting 1 in 50 homes with an average claim of more than \$9,500.

Our growing population requires a better level of control for water. [The Toilet Scrooge™](#) Valves toilet shutoff eliminates waste, monitors for leaks, saving water.
